The Practical Guide to Building Reliable Networked Multiplayer Games

Networked multiplayer games are a multibillion dollar business: some games now attract tens of millions of players. In this practical, code-rich guide, Joshua Glazer and Sanjay Madhav guide you through every aspect of engineering them. Drawing on their immense experience as both game developers and instructors, the authors lead you through building a robust multiplayer architecture, and creating every engine-level system. You'll learn through in-depth working code examples for two complete games: an action game and a real time strategy (RTS) game.

First, Madhav and Glazer review the essentials of networking and network programming from the standpoint of game developers. Next, they walk through managing game data transmission, updating game objects across the network, and organizing the devices that join your game. You'll learn how to ensure reliable performance despite the Internet's inherent inconsistencies, and how to design game code for maximum security and scalability. The authors conclude by addressing two increasingly crucial issues: incorporating gamer services and hosting your games in the cloud.

This guide's content has been extensively tested through the authors' multiplayer game programming courses at USC. It is equally valuable both to students *and* to working game programmers moving into networked games.

Coverage includes

- How games have evolved to meet the challenges of networked environments
- Using Internet communication protocols and standards in game development
- Working with Berkeley Socket, the most widely used networking construct in multiplayer gaming
- Formatting game data for efficient Internet transmission
- Synchronizing states so all players share the same world
- Organizing networking topologies for large-scale games
- Overcoming latency and jitter problems that cause delays or lost data
- Scaling games without compromising performance
- Combating security vulnerabilities and software cheats
- Leveraging the networking functionality of the popular Unreal 4 and Unity game engines
- Integrating gamer services such as matchmaking, achievements, and leaderboards
- Running game servers in the cloud

About the Website C++ source code for all examples is available at *github.com/MultiplayerBook* .
Instructors will also find a full set of PowerPoint slides and a sample syllabus.

From reader reviews:

Roger Ruelas:

Book is actually written, printed, or illustrated for everything. You can realize everything you want by a publication. Book has a different type. We all know that that book is important matter to bring us around the world. Alongside that you can your reading proficiency was fluently. A e-book Multiplayer Game Programming: Architecting Networked Games (Game Design) will make you to become smarter. You can feel a lot more confidence if you can know about every little thing. But some of you think which open or reading some sort of book make you bored. It is far from make you fun. Why they are often thought like that? Have you trying to find best book or acceptable book with you?

Ardith Bobo:

The book Multiplayer Game Programming: Architecting Networked Games (Game Design) can give more knowledge and also the precise product information about everything you want. Why must we leave the best thing like a book Multiplayer Game Programming: Architecting Networked Games (Game Design)? A number of you have a different opinion about book. But one aim which book can give many data for us. It is absolutely correct. Right now, try to closer using your book. Knowledge or info that you take for that, you may give for each other; you can share all of these. Book Multiplayer Game Programming: Architecting Networked Games (Game Design) has simple shape but you know: it has great and big function for you. You can appearance the enormous world by start and read a book. So it is very wonderful.

Eugene Williams:

This Multiplayer Game Programming: Architecting Networked Games (Game Design) book is not really ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is usually information inside this guide incredible fresh, you will get data which is getting deeper you read a lot of information you will get. This particular Multiplayer Game Programming: Architecting Networked Games (Game Design) without we comprehend teach the one who reading it become critical in contemplating and analyzing. Don't always be worry Multiplayer Game Programming: Architecting Networked Games (Game Design) can bring whenever you are and not make your tote space or bookshelves' turn into full because you can have it with your lovely laptop even cell phone. This Multiplayer Game Programming: Architecting Networked Games (Game Design) having excellent arrangement in word along with layout, so you will not sense uninterested in reading.

Richard Diller:

As a pupil exactly feel bored to reading. If their teacher expected them to go to the library as well as to make summary for some reserve, they are complained. Just tiny students that has reading's spirit or real their passion. They just do what the professor want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that examining is not important, boring and can't see colorful

photographs on there. Yeah, it is being complicated. Book is very important for you personally. As we know that on this era, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore , this Multiplayer Game Programming: Architecting Networked Games (Game Design) can make you truly feel more interested to read.
