Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics)

Peter Corke

Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics) Peter Corke

The practice of robotics and computer vision both involve the application of computational algorithms to data. Over the fairly recent history of the fields of robotics and computer vision a very large body of algorithms has been developed. However this body of knowledge is something of a barrier for anybody entering the field, or even looking to see if they want to enter the field ? What is the right algorithm for a particular problem?, and importantly, How can I try it out without spending days coding and debugging it from the original research papers?

The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used ?instant gratification in just a couple of lines of MATLAB code. The code can also be the starting point for new work, for researchers or students, by writing programs based on Toolbox functions, or modifying the Toolbox code itself.

The purpose of this book is to expand on the tutorial material provided with the toolboxes, add many more examples, and to weave this into a narrative that covers robotics and computer vision separately and together. The author shows how complex problems can be decomposed and solved using just a few simple lines of code, and hopefully to inspire up and coming researchers. The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision. It is written in a light but informative style, it is easy to read and absorb, and includes a lot of Matlab examples and figures. The book is a real walk through the fundamentals of robot kinematics, dynamics and joint level control, then camera models, image processing, feature extraction and epipolar geometry, and bring it all together in a visual servo system.

Additional material is provided at <http://www.petercorke.com/RVC>

From reader reviews:

Frank Farrow:

Do you have favorite book? Should you have, what is your favorite's book? E-book is very important thing for us to know everything in the world. Each book has different aim or even goal; it means that e-book has different type. Some people feel enjoy to spend their the perfect time to read a book. These are reading whatever they take because their hobby is reading a book. Why not the person who don't like looking at a book? Sometime, man or woman feel need book after they found difficult problem or maybe exercise. Well, probably you should have this Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics).

Chris Manley:

Book is to be different for each and every grade. Book for children until eventually adult are different content. As it is known to us that book is very important for us. The book Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics) ended up being making you to know about other know-how and of course you can take more information. It is extremely advantages for you. The e-book Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics) is not only giving you much more new information but also to get your friend when you experience bored. You can spend your own spend time to read your publication. Try to make relationship using the book Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics). You never truly feel lose out for everything when you read some books.

Lois Hutter:

Nowadays reading books be than want or need but also get a life style. This reading routine give you lot of advantages. The huge benefits you got of course the knowledge your information inside the book this improve your knowledge and information. The knowledge you get based on what kind of reserve you read, if you want get more knowledge just go with education books but if you want truly feel happy read one together with theme for entertaining such as comic or novel. Often the Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics) is kind of reserve which is giving the reader capricious experience.

James Garza:

Book is one of source of information. We can add our knowledge from it. Not only for students but in addition native or citizen need book to know the upgrade information of year in order to year. As we know those publications have many advantages. Beside most of us add our knowledge, also can bring us to around the world. From the book Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics) we can have more advantage. Don't you to be creative people? For being creative person must want to read a book. Just choose the best book that suited with your aim. Don't be doubt

to change your life with that book Robotics, Vision and Control: Fundamental Algorithms in MATLAB (Springer Tracts in Advanced Robotics). You can more desirable than now.
