Excerpt from Electric Welding: A Comprehensive Treatise on the Practice of the Various Resistance and Arc Welding Processes, Covering Descriptions of the Machines and Apparatus Used and the Applications Both in Manufacturing and Repair Work

Electric welding has become so important an art in the mechanical industries that a comprehensive treatise on this subject covering both the resistance and the arc welding processes is needed in the trade. A special study of the subject has, therefore, been made by the authors of this work, who have been assisted in their work by the experts in resistance and arc welding of some of the most prominent concerns in the United States engaged in this line of work. Credit is especially due the C. & C. Electric & Mfg. Co., the General Electric Co., the Lincoln Electric Co., the Thomson Electric Welding Co., the Westinghouse Electric & Manufacturing Co., and the Wilson Welder & Metals Co. for the cooperation and assistance which they have rendered in supplying information in connection with this undertaking. Consultations with the experts of these companies have made it possible to obtain thoroughly up-to-date information embodying the latest developments and discoveries in the art, and it is believed that, for this reason, the book will prove especially useful to those who are already employing electric welding equipment or who are contemplating its use, as well as to the students of the subject who desire to obtain authoritative information on the electric welding processes. Credit is also due Mr. Alan M. Bennett, whose treatise on Arc Welding, written for Machinery, has been freely consulted and employed in the writing of the chapter on Arc Welding.
