Mathematical Cardiac Electrophysiology (MS&A)

Piero Colli Franzone, Luca F. Pavarino, Simone Scacchi

Mathematical Cardiac Electrophysiology (MS&A) Piero Colli Franzone, Luca F. Pavarino, Simone Scacchi

This book covers the main mathematical and numerical models in computational electrocardiology, ranging from microscopic membrane models of cardiac ionic channels to macroscopic bidomain, monodomain, eikonal models and cardiac source representations. These advanced multiscale and nonlinear models describe the cardiac bioelectrical activity from the cell level to the body surface and are employed in both the direct and inverse problems of electrocardiology. The book also covers advanced numerical techniques needed to efficiently carry out large-scale cardiac simulations, including time and space discretizations, decoupling and operator splitting techniques, parallel finite element solvers. These techniques are employed in 3D cardiac simulations illustrating the excitation mechanisms, the anisotropic effects on excitation and repolarization wavefronts, the morphology of electrograms in normal and pathological tissue and some reentry phenomena. The overall aim of the book is to present rigorously the mathematical and numerical foundations of computational electrocardiology, illustrating the current research developments in this fast-growing field lying at the intersection of mathematical physiology, bioengineering and computational biomedicine. This book is addressed to graduate student and researchers in the field of applied mathematics, scientific computing, bioengineering, electrophysiology and cardiology.

From reader reviews:

Mark Cabrera:

The feeling that you get from Mathematical Cardiac Electrophysiology (MS&A) is a more deep you excavating the information that hide in the words the more you get thinking about reading it. It does not mean that this book is hard to understand but Mathematical Cardiac Electrophysiology (MS&A) giving you joy feeling of reading. The copy writer conveys their point in selected way that can be understood through anyone who read the idea because the author of this book is well-known enough. That book also makes your personal vocabulary increase well. That makes it easy to understand then can go together with you, both in printed or e-book style are available. We recommend you for having that Mathematical Cardiac Electrophysiology (MS&A) instantly.

Benita Newton:

Would you one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Aim to pick one book that you never know the inside because don't ascertain book by its cover may doesn't work the following is difficult job because you are frightened that the inside maybe not seeing that fantastic as in the outside search likes. Maybe you answer may be Mathematical Cardiac Electrophysiology (MS&A) why because the fantastic cover that make you consider regarding the content will not disappoint anyone. The inside or content will be fantastic as the outside or cover. Your reading sixth sense will directly direct you to pick up this book.

Jessica Henriquez:

In this period of time globalization it is important to someone to receive information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information quicker to share. You can find a lot of referrals to get information example: internet, magazine, book, and soon. You can view that now, a lot of publisher in which print many kinds of book. Typically the book that recommended for you is Mathematical Cardiac Electrophysiology (MS&A) this guide consist a lot of the information in the condition of this world now. This particular book was represented so why is the world has grown up. The language styles that writer use for explain it is easy to understand. The particular writer made some research when he makes this book. This is why this book ideal all of you.

Victoria Austin:

You can get this Mathematical Cardiac Electrophysiology (MS&A) by check out the bookstore or Mall. Just viewing or reviewing it may to be your solve trouble if you get difficulties to your knowledge. Kinds of this guide are various. Not only simply by written or printed but can you enjoy this book by e-book. In the modern era including now, you just looking by your local mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose suitable ways for you.
